

SEA PRO®

APPLICATIONS

- Any diesel engine with flow rates up to 540 gph
 - Marine Applications
 - High Corrosion Areas
 - Gas & Oil

ELIMINATE UNNECESSARY CHANGES & MAINTENANCE

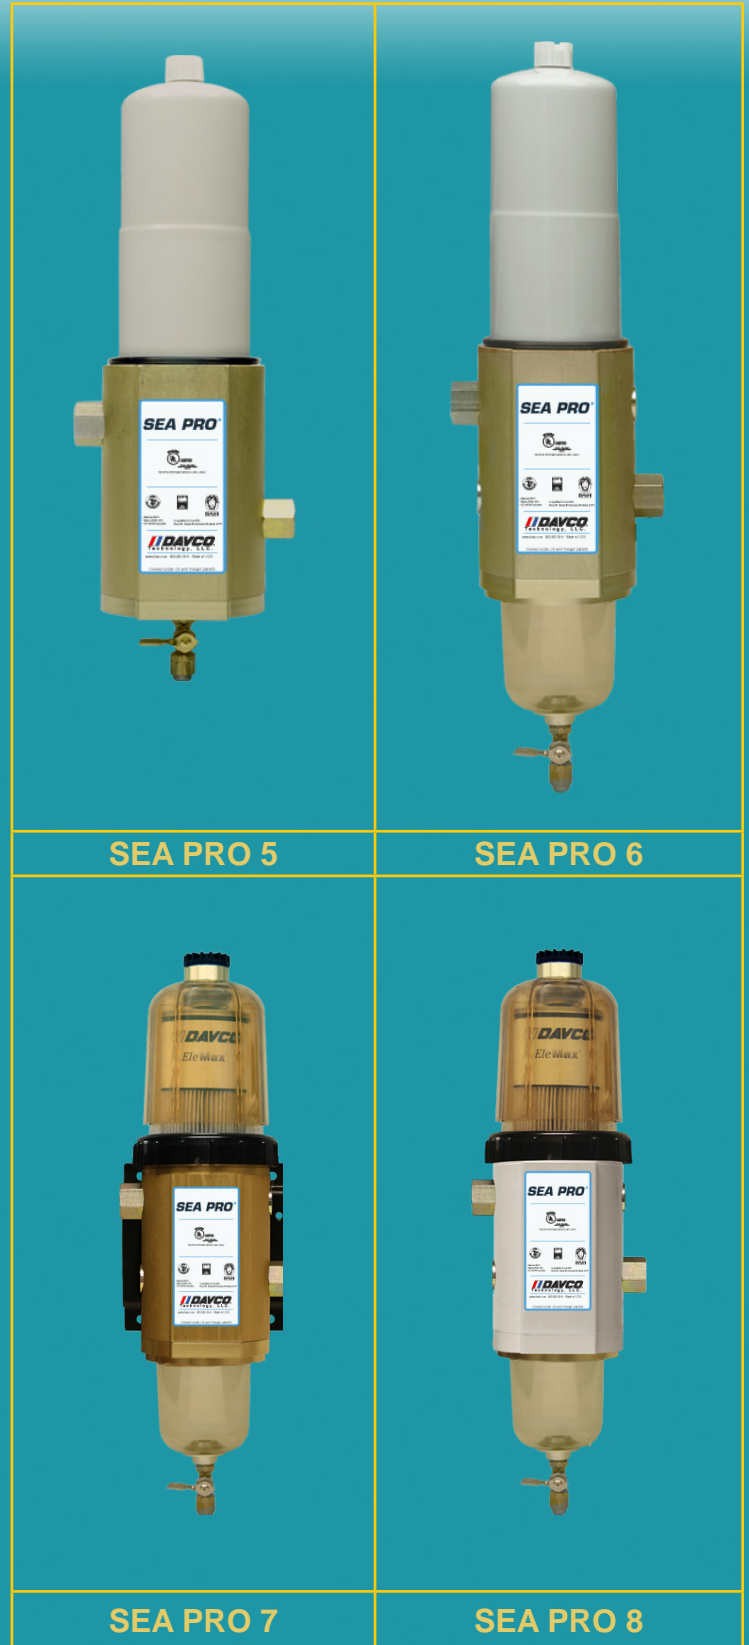

- All-in-one fuel filter and water separator for marine applications
- Clear cover provides instant visual indication of filter life
- **“SEEING IS BELIEVING®”**
See when NOT to change the filter
- Extended filter change intervals
- Enhanced fuel system troubleshooting
- Sea Pro 5 , 6 — Spin-on Filter
- Sea Pro 6, 7, 8 — Clear bowl and large drain allows easy detection and removal of contaminants and water
- Sea Pro 8 — White Imron Paint

5 MINUTE FILTER CHANGES

- Check valve eliminates drainback during filter changes
- Filter Element — Patented design for extended life and maximum filtration performance
- Drain valve with easy access
- Self-priming port — Remove the cap, pour in fuel and restart the engine with clean “filtered” fuel

MODELS & OPTIONS

- Base Model — Unheated
- Available with isolation valves
- Water-In-Fuel (WIF) sensor

TYPICAL INSTALLATION

HOW IT WORKS

- Fuel from the tank enters the fuel processor body.
- Large contaminants and “free” water are separated and remain in the body.
- Fuel rises into the clear cover area.
- Contaminants and emulsified water are captured by the filter media.
- Fuel level rises to maintain a fuel path through clean filter media (path of least resistance).
- Clean, water free, fuel exits the fuel processor to the engine fuel injection system.
